

New design possibilities with black, white and grey air control elements

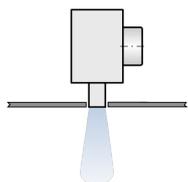

Asymmetrical plenum box

Horizontal air discharge

Angled airflow

Vertical airflow

Slot diffusers for ceiling installation

PURELINE50

The clean solution for significantly less ceiling contamination

Perfectly integrated slot diffuser for large volume flow rates, which can be easily and inconspicuously installed in the suspended ceiling.

- Simple and fast installation – tool-free fastening of the diffuser face
- New areas of application – including as air curtains for food counters
- High flexibility thanks to numerous standard variants
- Extended range of applications, as now available with 1 to 4 slots
- Very high comfort due to lower sound power levels and improved temperature and velocity reduction
- Improved energy efficiency due to lower pressure losses

General information

Application

- Type PURELINE50 slot diffusers are used as supply air or extract air devices in comfort zones
- The many variants allow for flexible use as mixed ventilation systems and make them suitable for various applications
- Unobtrusive integration into suspended ceilings
- For room heights up to 4 m (lower edge of suspended ceiling)
- Suitable for large volume flow rates. Thanks to the option of 1-4 slots, the scope of application is wide-ranging.
- One-way or alternating air discharge can be adjusted on site to meet local requirements
- High induction results in a rapid reduction of the temperature difference and airflow velocity (supply air variant)
- For variable and constant volume flows
- For supply air to room air temperature differences from – 10 to +10 K

Special features

- Uniform air pattern reduces contamination of the ceiling due to induced room air
- Horizontal, angled or vertical air discharge by means of manually adjustable air control elements
- Comfortable indoor climate due to high induction and rapid reduction of temperature differences and airflow velocities
- Attractive appearance due to extruded aluminium sections with anodised finish or powder coating (RAL CLASSIC colour)
- Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- Suitable for continuous linear arrangement

Nominal sizes

- L_n : 600, 750, 900, 1050, 1200, 1350, 1500, 1650, 1800, 1950 mm
- Diffuser face can be ordered in mm increments, also in intermediate lengths

Variants

PL50-... :

- -*: 1 to 4 slots
- -PF: Combination of diffuser face and plenum box with fixed connection
- -SF: Combination of diffuser face and plenum box with detachable screw fixing
- -PB: Plenum box only (for combination with DS)
- -DS: Only diffuser face with extended border and screw fixing
- -DF: Only diffuser face with extended border and spring clip
- -CD: Air transfer section that can be integrated into linear runs. On the reverse side of the diffuser face, there are openings for the air to flow through. The air transfer section has to be fastened by others. The connectors supplied are only used to position and align the air transfer sections.
- -BD: Non-active section that can be integrated into linear runs. The diffuser face is connected on the reverse side so that air is prevented from flowing through the non-active section. The non-active section has to be fastened by others. The connectors supplied are only used to position and align the air transfer sections.
- -CS: Corner section

Position of the plenum box on the diffuser face, if the plenum box is shorter than the diffuser face

- Central position of plenum box
- Plenum box on the left (LE)
- Plenum box on the right (RI)

Plenum box variant

- Symmetrical plenum box with horizontal connection (HS)
- Symmetrical plenum box with vertical connection (VS)
- Asymmetrical plenum box with horizontal connection (HA)

Construction

Diffuser face finish

- With anodised finish, E6-C-0, natural colour
- P1: Powder-coated RAL 9010, pure white, GE50
- P1: Powder-coated RAL9010, RAL9005, RAL9006, RAL9016, RAL7012 GE30
- P1: Powder-coated DB703
- P1: Powder-coated in other RAL CLASSIC colours, GE70 (no luminous colours)

Attachments

- D: Damper blade for volume flow rate balancing
- LS: Lip seal
- L: Internal lining
- EP: Two end plates
- EA: Two end angles

Single diffusers are factory fitted with end plates or end angles. Either end plates or end angles can be used as the end piece.

Accessories

- EP: Two end plates
- EA: Two end angles

For a continuous linear arrangement, the end plates or end angles have to be ordered separately and fitted by others. 2 alignment plates for connecting the slot diffusers to each other are supplied separately with each slot diffuser without a factory-fitted end piece.

Construction features

- Spigot suitable for circular ducts to EN 1506 or EN 13180
- 4 suspension points on the plenum box for fixing to be performed by others
- Manually adjustable air control elements with detent for defined adjustment of the air distribution
- Factory-set air distribution, manually adjustable on site
- Spigot with groove for lip seal (only for accessories with lip seal)
- Diffuser face available in mm increments between 600 and 1950 mm
- If the diffuser face is longer than the plenum box, the protruding areas of the diffuser face are covered at the reverse side.
- Plenum boxes only available in nominal lengths
- Extract air variant with air control elements
- The optionally available neck extension in the standard dimensions 22, 47, 72, 97 and 121 mm can be used to compensate for structural conditions
- Fixing material for the diffuser face is supplied separately with the variants -SF and -DS

Materials and surfaces

- Diffuser face made from extruded aluminium sections
- Air control elements made of ABS plastic, UL 94, V-0, flame retardant
- Plenum box made of galvanised sheet steel
- End plates and end angles made of aluminium
- Lip seal made of Evoprene
- Lining of mineral wool and closed cell vinyl foam
- Diffuser face with anodised finish, E6-C-0, natural colour
- P1: Powder-coated, RAL CLASSIC colour
- Air control elements similar to RAL 9005, black
- G: Air control elements similar to RAL 9006, grey
- W: Air control elements similar to RAL 9010, white
- Mineral wool
- Mineral wool faced with glass fibre fabric on the surfaces in contact with the air, abrasion-resistant up to 20 m/s
- To EN 13501, fire rating class A1, non-combustible
- RAL quality mark RAL-GZ 388
- Non-hazardous to health thanks to being highly biosoluble in accordance with the Ordinance on Hazardous Substances and Note Q of the European Directive (EC) No. 1272/2008
- Inert to fungal and bacterial growth

Standards and guidelines

- Sound power level of the air-regenerated noise measured according to EN ISO 5135
- Compliant with VDI 6022

Maintenance

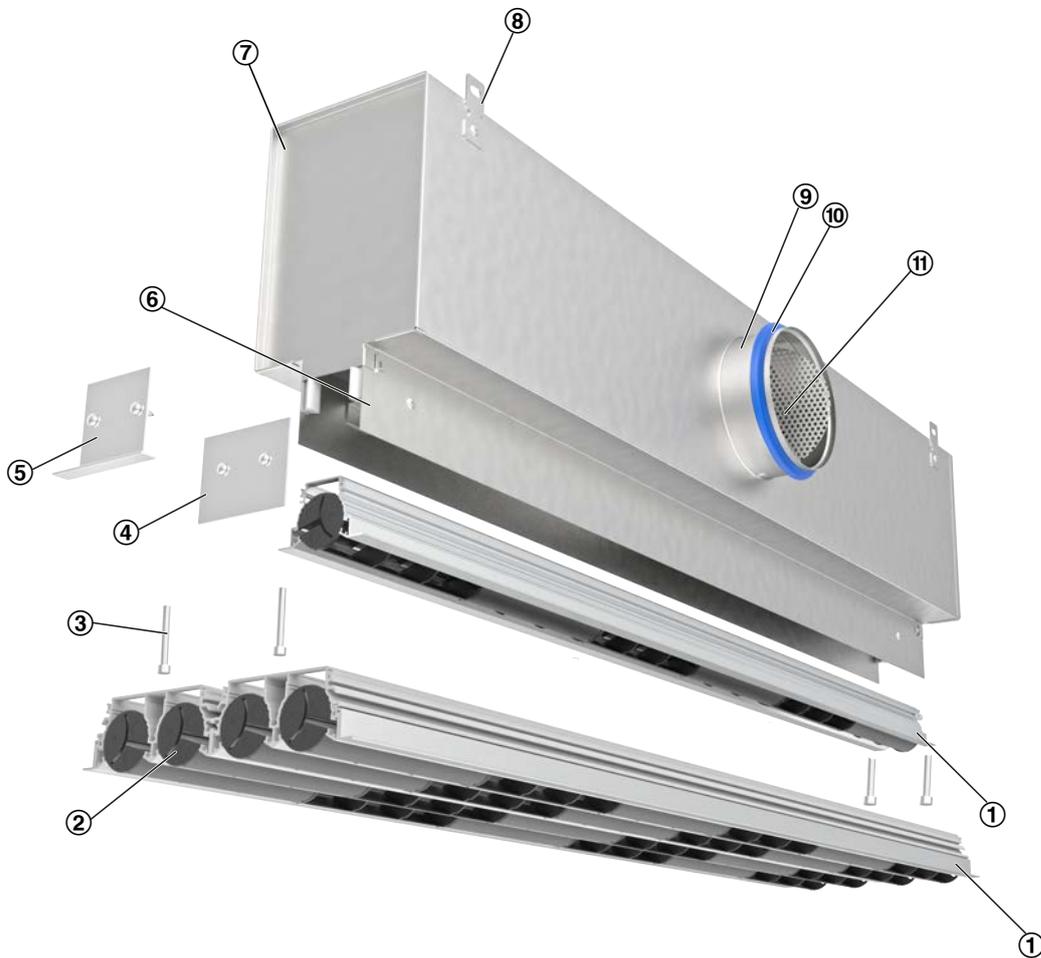

- Maintenance-free as construction and materials are not subject to wear
- Inspection and cleaning to VDI 6022

Function

Slot diffusers direct the supply air from ventilation and air conditioning systems into the room, either horizontally, at an angle or vertically.
 The resulting airflow induces high levels of room air, thereby rapidly reducing the airflow velocity and the temperature difference between supply air and indoor air.
 The result is a mixed flow air distribution in comfort zones, with good overall room ventilation, creating only very little turbulence in the occupied zone.
 Type PURELINE50 slot diffusers are factory fitted with manually adjustable air control elements.

The airflow direction can be adjusted to meet various local requirements.
 Air discharge is one-way or alternating horizontal.
 Heating operation with vertical flow is also possible, as is angled air discharge.
 The supply air to room air temperature difference can range from -10 to $+10$ K.
 A damper blade (optional) enables volume flow rate balancing for commissioning.
 To give rooms an aesthetic, uniform look, Type PURELINE50 diffusers may also be used for extract air.

Schematic illustration of PL50-*-SF

- ① Diffuser face, 1, 2, 3 or 4 slots
- ② Adjustable air control elements
- ③ Screw fixing
- ⑥ Neck
- ⑦ Plenum box
- ⑧ Suspension lug
- ⑨ Spigot

- Optional
- ④ End plate
 - ⑤ End angle
 - ⑩ Lip seal
 - ⑪ Damper blade for volume flow rate balancing

Technical data

Nominal lengths	600 – 1950 mm, in increments of 150 mm
Number of slots	1, 2, 3 or 4
Neck extension	22, 47, 72, 97, 121 mm
Minimum volume flow rate, at $\Delta t_z = -10$ K	10 l/s or 36 m ³ /h
Maximum volume flow rate, at LWA \cong 50 dB(A)	608 l/s or 2190 m ³ /h
Supply air to room air temperature difference	-10 to +10 K

Quick sizing

Quick sizing tables provide a good overview of the volume flow rates and corresponding sound power levels and differential pressures.

Exact values for all parameters can be determined with our Easy Product Finder design program.

Up to nominal length 1500 mm, sizing includes one spigot; from length 1650 mm, two spigots are required.

PL50-1, supply air, alternating horizontal air discharge, sound power level and total differential pressure D = 123

Specification text

This specification text describes the general properties of the product. Texts for variants can be generated with our Easy Product Finder design program.

Specification text

Slot diffusers of Type PURELINE50 with individually, manually adjustable air control elements and 1, 2, 3 or 4 slots.

Air distribution can be alternating horizontal, alternating angled, vertical, one-way horizontal to the left or one-way horizontal to the right.

The slot diffusers are intended to be installed in suspended ceilings and are suitable for supply air and extract air. Ready-to-install component which consists of a diffuser face with a choice of black, grey or white air control elements.

Variants with plenum boxes have 1 or 2 spigots which are arranged horizontally or vertically for symmetrical plenum boxes and horizontally for asymmetrical plenum boxes.

The plenum boxes are fitted with 4 suspension lugs.

The connection between the diffuser face and the plenum box can be fixed or detachable.

Spigots are suitable for circular ducts according to EN 1506 or EN 13180. The sound power level of air-regenerated noise is measured according to EN ISO 5135.

Special features

- Uniform air pattern reduces contamination of the ceiling due to induced room air
- Horizontal, angled or vertical air discharge by means of manually adjustable air control elements
- Comfortable indoor climate due to high induction and rapid reduction of temperature differences and airflow velocities
- Attractive appearance due to extruded aluminium sections with anodised finish or powder coating (RAL CLASSIC colour)
- Diffuser face has been optimised for maximum volume flow rate at low sound power levels
- Suitable for continuous linear arrangement

Materials and surfaces

- Diffuser face made from extruded aluminium sections
- Air control elements made of ABS plastic, UL 94, V-0, flame retardant
- Plenum box made of galvanised sheet steel
- End plates and end angles made of aluminium
- Lip seal made of Evoprene
- Lining of mineral wool and closed cell vinyl foam
- Diffuser face with anodised finish, E6-C-0, natural colour
- P1: Powder-coated, RAL CLASSIC colour
- Air control elements similar to RAL 9005, black
- G: Air control elements similar to RAL 9006, grey
- W: Air control elements similar to RAL 9010, white

Mineral wool

- Mineral wool faced with glass fibre fabric on the surfaces in contact with the air, abrasion-resistant up to 20 m/s
- To EN 13501, fire rating class A1, non-combustible
- RAL quality mark RAL-GZ 388
- Non-hazardous to health thanks to being highly biosoluble in accordance with the Ordinance on Hazardous Substances and Note Q of the European Directive (EC) No. 1272/2008
- Inert to fungal and bacterial growth

Construction

Diffuser face finish

- With anodised finish, E6-C-0, natural colour
- P1: Powder-coated RAL 9010, pure white, GE50
- P1: Powder-coated RAL9010, RAL9005, RAL9006, RAL9016, RAL7012 GE30
- P1: Powder-coated DB703
- P1: Powder-coated in other RAL CLASSIC colours, GE70 (no luminous colours)

Technical data

- Nominal lengths: 600 – 1950 mm, in increments of 150 mm
- Number of slots: 1, 2, 3 or 4
- Minimum volume flow rate with $\Delta t_z = -10$ K: 10 l/s or 36 m³/h
- Maximum volume flow rate, at LWA \cong 50 dB(A): 608 l/s or 2190 m³/h
- Supply air to room air temperature difference: -10 to $+10$ K

Sizing data

- V _____ [m³/h]
- Δp_t _____ [Pa] air-regenerated noise
- L_{WA} _____ [dB(A)]

Product details

PL50-1/.../B00, installation in continuous ceilings

With anodised finish, E6-C-0, natural colour

PL50-2/.../B00/P1-RAL 9010, installation in continuous ceilings

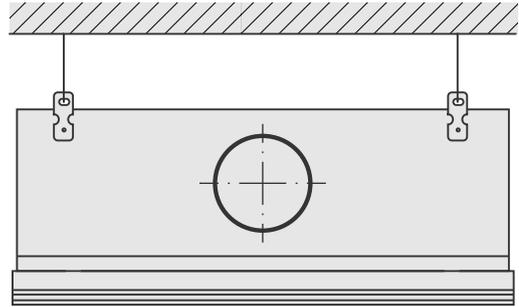

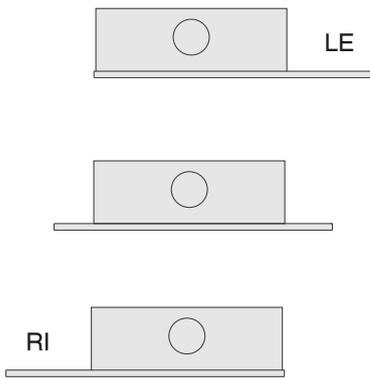

Powder-coated RAL 9010, pure white

Installation and commissioning

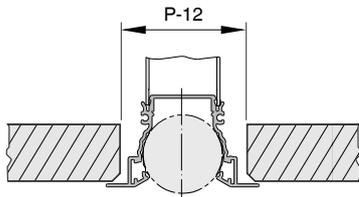

- Preferably for rooms with a clear height up to 4.0 m
- Flush ceiling installation
- Horizontal or vertical duct connection
- Diffuser faces with shorter plenum boxes and non-active diffusers have a slot cover on the rear
- For a continuous linear arrangement, connect the diffuser faces with alignment plates
- If necessary, carry out volume flow rate balancing with the damper blade
- Suitable material for fixing the slot diffusers must be provided by others

These are only schematic diagrams to illustrate installation details.

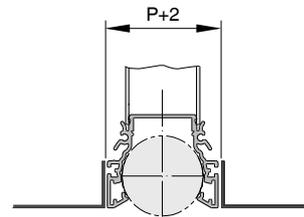

PL plenum box, positioned on the left, in the centre, on the right

Installation opening

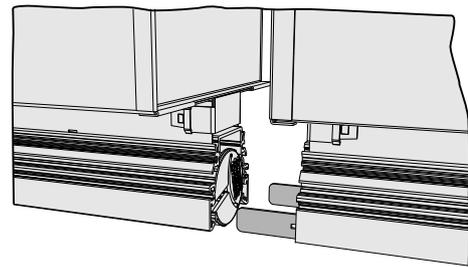

Installation opening

Continuous ceiling (with extended border)

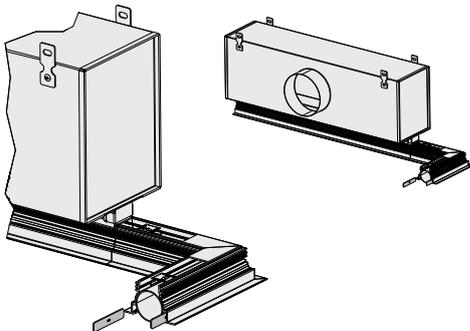

Long field plates (without extended border)

Continuous linear arrangement

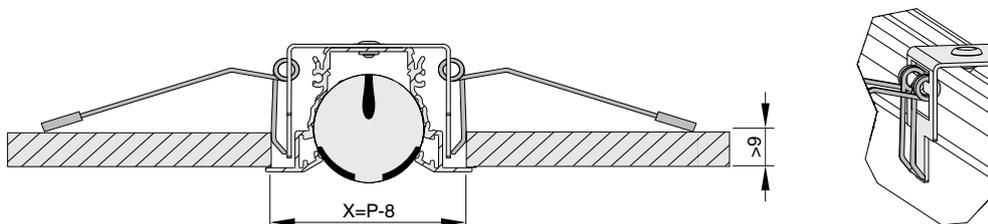

For continuous linear arrangement, the slot diffusers are connected to each other using the connectors supplied separately.

Connecting corner sections

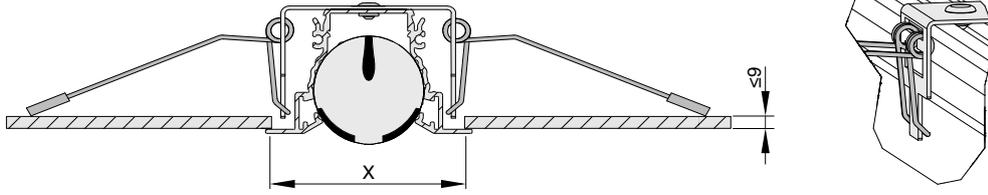

The connection between the corner section and slot diffuser is made using the connectors supplied separately. If necessary, the corner section must be additionally fixed by the customer.

PL50-DF spring clip fixing

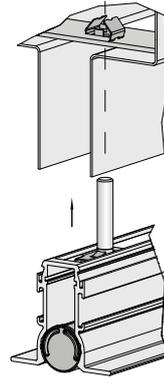

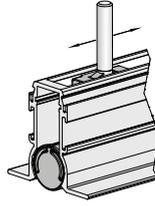

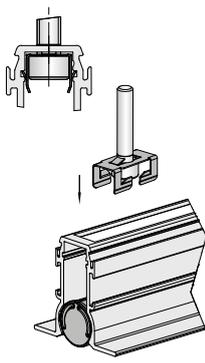

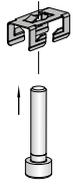

If ceiling thickness is > 9 mm

PL50-DF spring clip fixing

If ceiling thickness is ≤ 9 mm

PL50 with detachable connection

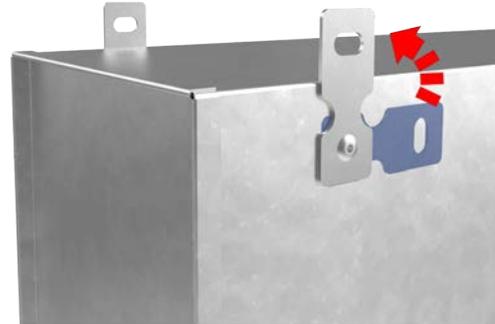

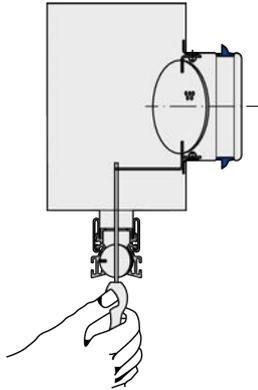

For the DS and SF variants, the fixing material for fastening the diffuser face to the plenum box is supplied in a bag.

Volume flow rate balancing

When several diffusers are connected to just one volume flow controller, it may be necessary to balance the volume flow rates.

- Slot diffusers with plenum box and damper blade (variant -M): The damper blade can be adjusted even after the diffuser face has been installed.

Volume flow rate balancing

- Move the air control elements near the spigot in such a way that it is possible to insert a screw driver

The plenum box is delivered with the suspension lugs turned by 90°

Nomenclature

$\varnothing D$ [mm]
Outer diameter of the spigot

C [mm]
Length of the spigot

m [kg]
Weight

L_1 [mm]
Length of front rail

L_3 [mm]
Length of plenum box

P [mm]
Width of slot section

H_4 [mm]
Height of plenum box

A [m²]
Upstream cross section

LN [mm]
Nominal length

B_3 [mm]
Width of plenum box

L_{WA} [dB(A)]
A-weighted sound power level of air-regenerated noise

q_v [m³/h]; [l/s]
Volume flow rate

Δt_z [K]
Supply air to room air temperature difference, i.e. supply air temperature minus room temperature

Δp_t [Pa]
Total differential pressure

Length specifications

For all length specifications without the unit of measurement shown, the unit millimetre [mm] applies.
